

1. How many molecules are there in 3.6 moles of molecules?

$$1. \underline{2.2 \times 10^{24}} \text{ molecules}$$

$$3.6 \text{ mol} \times \frac{6.02 \times 10^{23} \text{ molecules}}{1 \text{ mol}}$$

2. How many moles of molecules are there in 4.3×10^{23} molecules?

$$2. \underline{0.71 \text{ mol}}$$

$$4.3 \times 10^{23} \text{ molecules} \times \frac{1 \text{ mol}}{6.02 \times 10^{23} \text{ molecules}}$$

3. How many atoms are there in one molecule of Aluminum bromide?

$$3. \underline{4 \text{ atoms}}$$

$$\begin{array}{rcl} \text{AlBr}_3 & & 1 \times \text{Al atoms} \\ & & 3 \times \text{Br atoms} \\ & \hline & 4 \text{ atoms} \end{array}$$

4. How many atoms are there in 43 molecules of calcium sulfate?

$$4. \underline{258 \text{ atoms}}$$

$$\text{CaSO}_4 \quad 1 \text{ molecule} = 6 \text{ atoms}$$

$$43 \text{ molecules} \times \frac{6 \text{ atoms}}{1 \text{ molecule}} = 258 \text{ atoms}$$

5. How many moles of atoms in 65 molecules of calcium chloride?

$$5. \underline{3.2 \times 10^{-22} \text{ moles of atoms}}$$

$$\begin{array}{rcl} \text{CaCl}_2 & & 1 \text{ molecule} = 3 \text{ atoms} \\ 65 \text{ molecules} \times \frac{3 \text{ atoms}}{1 \text{ molecule}} \times \frac{1 \text{ mol}}{6.02 \times 10^{23} \text{ atoms}} & = & 3.2 \times 10^{-22} \text{ moles of atoms} \\ (195 \text{ atoms} \div 6.02 \times 10^{23} \text{ atoms}) & & \end{array}$$

6. How many molecules of hydrogen sulfate can be produced from 4.3 moles of hydrogen atoms?

$$6. \underline{1.3 \times 10^{24} \text{ molecules}}$$

$$\text{H}_2\text{SO}_4 \quad 1 \text{ molecule has 2 H atoms}$$

$$4.3 \text{ mol (H atoms)} \times \frac{6.02 \times 10^{23} \text{ atoms}}{1 \text{ mol}} \times \frac{1 \text{ molecule}}{2 \text{ atoms}} = 1.3 \times 10^{24} \text{ molecules}$$

7. How many atoms of oxygen are there in 3.8 mol of water molecules?

$$7. \underline{2.3 \times 10^{24} \text{ atoms.}}$$

$$\text{H}_2\text{O} \quad 1 \text{ molecule has 1 O atom}$$

$$3.8 \text{ mol} \times \frac{6.02 \times 10^{23} \text{ molecules}}{1 \text{ mol}} \times \frac{1 \text{ atom}}{1 \text{ molecule}} = 2.3 \times 10^{24} \text{ atoms}$$
